## **Enal** Tour Tracker

Piotr Kondziołka & Karol Słowiak

## Omówienie projektu

wstępne plany

Java, Android Studio

Importowanie danych z tras koncertowych na całym świecie

Mechanizm przerabiający nazwy miast na współrzędne geograficzne

Android API, umieszczanie interaktywnych punktów na mapie z opisem każdego wydarzenia

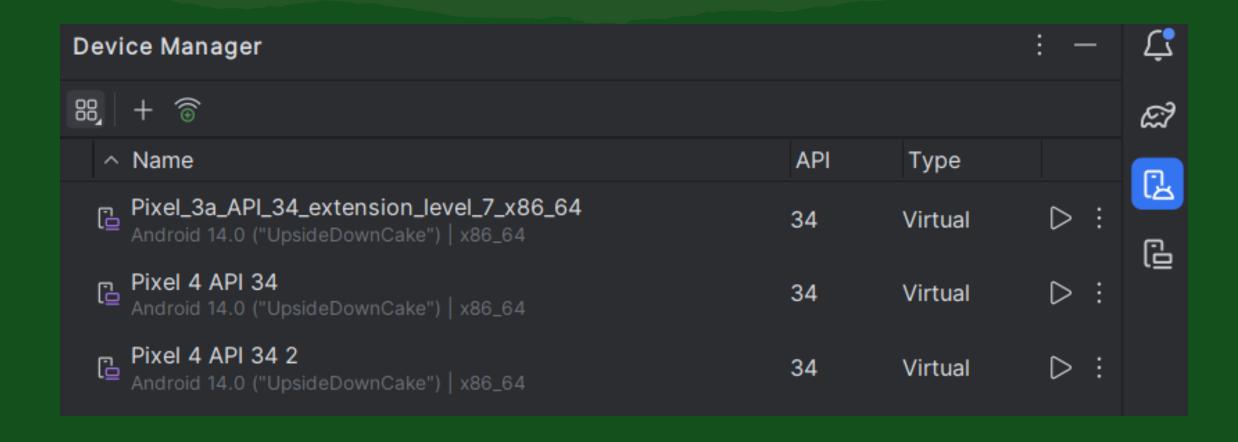

## Wstęp do Android Studio

• Dlaczego akurat Android Studio?

Zapoznanie się ze środowiskiem

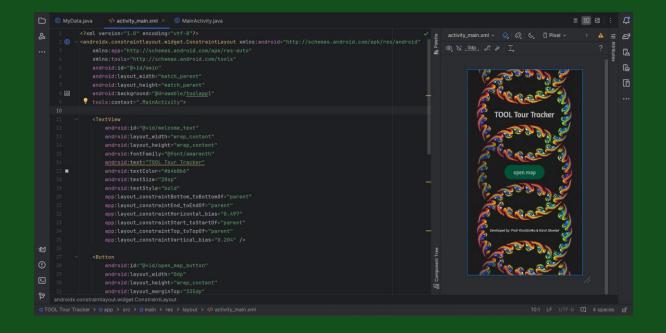

### Emulatory urządzeń mobilnych

#### activity\_main.xml

To tutaj wszystko się zaczyna!

#### MainActivity.java

Funkcjonalność!

### Współpraca tych dwóch plików

```
<Button
    android:id="@+id/button"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="click me!"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:layout_constraintVertical_bias="0.56" />
```

activity main.xml

```
public class MainActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        TextView textView = findViewById(R.id.textView);
        Button button1 = findViewById(R.id.button);
        button1.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                clickCount++;
                // Aktualizacja tekstu w TextView z liczbą kliknięć
                textView.setText("Clicked " + clickCount + " times");
```

## Omówienie projektu

Java, Android Studio

Importowanie danych z tras koncertowych na całym świecie

Mechanizm przerabiający nazwy miast na współrzędne geograficzne

Android API, umieszczanie interaktywnych punktów na mapie z opisem każdego wydarzenia

#### Omówienie projektu

Dostarczanie danych

https://www.setlist.fm/setlists/tool-2bd6d836.html

Pobieranie danych

Uzyskanie lokalizacji (nazwa miasta, region)

Konwertowanie nazwy lokalizacji na współrzędne geograficzne

Przesłanie tablicy z danymi

Search for Artist, Venue, Tour, ...

ASIGN IN F F G

app:layout_constraintWidth_percent="0.35" />
```

# @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity\_main); // inicjalizacja przycisku otwierajacego mape i fragmentu mapy openMapButton = findViewById(R.id.open\_map\_button); mapFragment = SupportMapFragment.newInstance();

#### Metoda on Create()

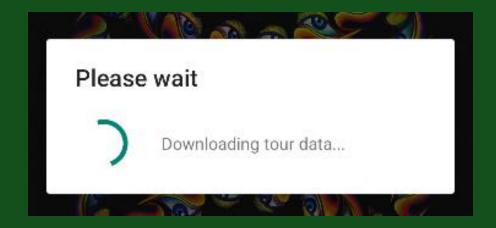

- metoda setContentView() ustawia widok aktywności na określony layout z naszego pliku XML
- **findViewById(R.id.open\_map\_button)** znajduje przycisk na podstawie jego identyfikatora i przypisuje go do zmiennej openMapButton
- ustawiany jest nasłuchiwacz kliknięć przycisku, który wywołuje akcję otwierania mapy

- metoda onClick() wywoływana jest w momencie kliknięcia przycisku, dla którego został ustawiony listener
- AsyncTask jest używany do wykonywania operacji w tle, które mogą być czasochłonne

```
public void onClick(View v) {
    if (!mapOpened) {
        showLoadingDialog(); // wyświetlenie ekranu ładowania
        new AsyncTask<Void, Void, String[][][]>() {
            @Override
            protected String[][][] doInBackground(Void... voids) {
                MyData myClass = new MyData();
                try {
                    myClass.fillDαtα(); // pobranie danych z klasy MyData
                    return myClass.getDanetab();
                } catch (IOException e) {
                    e.printStackTrace();
                    return null;
```

#### Ekran ładowania

```
private void showLoadingDialog() {
    loadingDialog = new ProgressDialog( context: MainActivity.this);
    loadingDialog.setMessage("Downloading tour data...");
    loadingDialog.setCancelable(false); // użytkownik nie może zam
    loadingDialog.setTitle("Please wait");
    loadingDialog.show(); // wyświetlenie ekranu ładowania
}
```

```
private void dismissLoadingDialog() {
    // sprawdzenie czy dialog ładowania jest wyświetlany
    if (loadingDialog != null && loadingDialog.isShowing()) {
        loadingDialog.dismiss(); // zamkniecie
    }
}
```

## Aktualizacja mapy na podstawie danych pobranych z klasy **MyData**

```
public void onMapReady(GoogleMap googleMap) {
    for(int k = 0; k < 30 - 1; k++) {
        for (int i = 0; i < 10; i++) {
            double lat = Double.parseDouble(danetab[5][i][k]);
            double lng = Double.parseDouble(danetab[6][i][k]);
            // informacje do wyświetlenia nad pinezką
            StringBuilder infoBuilder = new StringBuilder();
            infoBuilder.append(danetab[1][i][k]);
            int colorHueVal = 0;
            String value = danetab[0][i][k];
            String trimmedValue = value.substring(Math.m\alpha x(0, value.length() - 4));
            if(trimmedValue.equals("2024")){
                colorHueVal = 300;
            // utworzenie obiektu LatLng na podstawie współrzędnych geograficznych
            LatLng location = new LatLng(lat, lng);
            MarkerOptions markerOptions = new MarkerOptions()
                    .title(danetab[0][i][k])
                    .snippet(infoBuilder.toString()) // dodanie informacji nad pinez
                    .icon(BitmapDescriptorFactory.defaultMarker(colorHueVal)); // us
            googleMap.addMarker(markerOptions); // dodanie znacznika do mapy
```
